 16 FL. OZ. (468 mL)

**DIRECTION FOR USE**  
 Stir or shake before using.

1. Square pipe ends and remove all burrs and dirt. Clean mating surfaces or pipe with W1 cleaner.
2. Pipe should easily go into fitting 1/3 to 3/4 of the way without forcing.
3. Prime mating surfaces according to directions on primer label.
4. Apply liberal coat of cement to inside of fittings; avoid puddling of cement. Puddling can cause weakening and premature failure of pipe or fitting. Apply second coat of cement to the pipe.
5. Assemble pipe and fitting while cement is still wet. If work is interrupted re-coat parts. Push pipe into socket, using a quarter turn.
6. Hold pipe and fitting together for 30 seconds to prevent pipe push-out longer at cold.
7. Wipe of excess cement. Allow 15 minutes for good handling strength.
8. Allow 24 hours before testing on pipe 2". Allow 48 hours though 6". Longer cure time may be required on damp, cold days.
